

Basic Skills (Literacy & Numeracy)

Please see below some information around the adult numeracy and literacy qualifications and what the outcomes are for completing these.

For Numeracy the 3 main outcomes are:

- Understanding and using mathematical information
- Calculating and manipulate mathematical information
- Interpreting results and communicating mathematical information

And for the Literacy the 3 main outcomes are:

- Read and understand a range of texts of varying complexity accurately and independently
- Read and obtain information of varying length and detail from different sources
- Write to communicate information, ideas and opinions clearly and effectively, using length, format and style appropriate to purpose, content and audience

These qualifications give the employees the opportunity to prove their skills and at the same time gain a national qualification in either numeracy/Literacy or both.

The benefits to the learners can be immense, increase their confidence as well as motivating them to maybe go onto the next level.

We offer these both at level 1 and 2, these qualifications can only be offered to employees that have **NOT** already completed a full apprenticeship or Key Skills.
